1。
Consider the toy key exchange protocol using an online trusted 3rd party (TTP) discussed in Lecture 9.1. Suppose Alice, Bob, and Carol are three users of this system (among many others) and each have a secret key with the TTP denoted k_a, k_b, k_c respectively. They wish to generate a group session key k_{ABC} that will be known to Alice, Bob, and Carol but unknown to an eavesdropper. How would you modify the protocol in the lecture to accommodate a group key exchange of this type? (note that all these protocols are insecure against active attacks)

- Bob contacts the TTP. TTP generates a random k_{AB} and a random k_{BC}. It sends to Bob

  $$E(k_a, k_{AB}), \quad \text{ticket}_1 \leftarrow E(k_a, k_{AB}), \quad \text{ticket}_2 \leftarrow E(k_c, k_{BC})$$
  .

  Bob sends ticket_1 to Alice and ticket_2 to Carol.

- Alice contacts the TTP. TTP generates a random k_{ABC} and sends to Alice

  $$E(k_a, k_{ABC}), \quad \text{ticket}_1 \leftarrow E_{(}k_c, E(k_b, k_{ABC})), \quad \text{ticket}_2 \leftarrow E(k_b, E(k_c, k_{ABC}))$$
  .

  Alice sends k_{ABC} to Bob and k_{ABC} to Carol.

- Alice contacts the TTP. TTP generates random k_{ABC} and sends to Alice

$$E(k_a, k_{ABC}), \quad \text{ticket}_1 \leftarrow E(k_b, k_{ABC}), \quad \text{ticket}_2 \leftarrow E(k_c, k_{ABC})$$

Week 5 - Problem Set

13/15 分 (86%)

测验, 15 个问题

Alice sends ticket_1 to Bob and ticket_2 to Carol.

正确

The protocol works because it lets Alice, Bob, and Carol

obtain k_{ABC} but an eaesdropper only sees encryptions

of k_{ABC} under keys he does not have.

- [ ] Alice contacts the TTP. TTP generates a random k_{AB} and a random k_{AC}. It sends to Alice

$$E(k_a, k_{AB}), \quad \text{ticket}_1 \leftarrow E(k_b, k_{AB}), \quad \text{ticket}_2 \leftarrow E(k_c, k_{AC})$$
.

Alice sends ticket_1 to Bob and ticket_2 to Carol.

2。

Let G be a finite cyclic group (e.g. $G = \mathbb{Z}_p^*$) with generator g.

Suppose the Diffie-Hellman function $\text{DH}_g(g^x, g^y) = g^{xy}$ is difficult to compute in G. Which of the following functions is also difficult to compute?

As usual, identify the f below for which the contra-positive holds: if $f(\cdot, \cdot)$ is easy to compute then so is $\text{DH}_g(\cdot, \cdot)$. If you can show that, then it will follow that if DH_g is hard to compute in G then so must be f.

- [ ] $f(g^x, g^y) = g^{x+y}$

未选择的是正确的

- [ ] $f(g^x, g^y) = g^{x-y}$

未选择的是正确的

- [ ] $f(g^x, g^y) = g^{xy+1}$

正确

an algorithm for calculating $f(g^x, g^y)$ can easily be converted into an algorithm for

calculating $\mathrm{DH}(\cdot,\cdot)$.

Therefore, if f were easy to compute then so would DH,

contrading the assumption.

- [ ] $f(g^x, g^y) = (g^{3xy}, g^{2xy})$ (this function outputs a pair of elements in G)

正确

an algorithm for calculating $f(\cdot,\cdot)$ can

easily be converted into an algorithm for

calculating $\mathrm{DH}(\cdot,\cdot)$.

Therefore, if f were easy to compute then so would DH,

contrading the assumption.

3。

Suppose we modify the Diffie-Hellman protocol so that Alice operates

as usual, namely chooses a random a in $\{1,\ldots,p-1\}$ and

sends to Bob $A \leftarrow g^a$. Bob, however, chooses a random b

in $\{1,\ldots,p-1\}$ and sends to Alice $B \leftarrow g^{1/b}$. What

shared secret can they generate and how would they do it?

- ( ) $\text{secret} = g^{a/b}$. Alice computes the secret as $B^{1/b}$

  and Bob computes A^a.

- ( ) $\text{secret} = g^{ab}$. Alice computes the secret as $B^{1/a}$

  and Bob computes A^b.

- ( ) $\text{secret} = g^{ab}$. Alice computes the secret as B^a

  and Bob computes A^b.

- (x) $\text{secret} = g^{a/b}$. Alice computes the secret as B^a

and Bob computes $A^{1/b}$.

Week 5 - Problem Set

测验, 15 个问题

13/15 分 (86%)

正确

This is correct since it is not difficult to see that

both will obtain $g^{a/b}$

4。

Consider the toy key exchange protocol using public key encryption described in Lecture 9.4.

Suppose that when sending his reply $c \leftarrow E(pk, x)$ to Alice, Bob appends a MAC $t := S(x, c)$ to the ciphertext so that what is sent to Alice is the pair (c, t). Alice verifies the tag t and rejects the message from Bob if the tag does not verify.

Will this additional step prevent the man in the middle attack described in the lecture?

- yes
- no

正确

an active attacker can still decrypt $E(pk', x)$ to recover x

and then replace (c, t) by (c', t')

where $c' \leftarrow E(pk, x)$ and $t \leftarrow S(x, c')$.

- it depends on what public key encryption system is used.
- it depends on what MAC system is used.

Week 5 - Problem Set

测验, 15 个问题

13/15 分 (86%)

The numbers 7 and 23 are relatively prime and therefore there must exist integers a and b such that $7a + 23b = 1$.

Find such a pair of integers (a, b) with the smallest possible $a > 0$.

Given this pair, can you determine the inverse of 7 in $\mathbb{Z}_{23}$?

Enter below comma separated values for $a,\ b$, and for 7^{-1} in $\mathbb{Z}_{23}$.

10,-3,10

正确回答

$7 \times 10 + 23 \times (-3) = 1$.

Therefore $7 \times 10 = 1$ in $\mathbb{Z}_{23}$ implying

that $7^{-1} = 10$ in $\mathbb{Z}_{23}$.

1 / 1 分

6。
Solve the equation $3x + 2 = 7$ in $\mathbb{Z}_{19}$.

8

正确回答

$x = (7 - 2) \times 3^{-1} \in \mathbb{Z}_{19}$

1 / 1 分

7。
How many elements are there in $\mathbb{Z}_{35}^*$?

24

正确回答

$|\mathbb{Z}_{35}^*| = \varphi(7 \times 5) = (7 - 1) \times (5 - 1)$.

8。

How much is $2^{10001} \bmod 11$?

Please do not use a calculator for this. Hint: use Fermat's theorem.

2

正确回答

By Fermat $2^{10} = 1$ in $\mathbb{Z}_{11}$ and therefore

$1 = 2^{10} = 2^{20} = 2^{30} = 2^{40}$ in $\mathbb{Z}_{11}$.

Then $2^{10001} = 2^{10001 \bmod 10} = 2^1 = 2$ in $\mathbb{Z}_{11}$.

1 / 1 分

9。

While we are at it, how much is $2^{245} \bmod 35$?

Hint: use Euler's theorem (you should not need a calculator)

32

正确回答

By Euler $2^{24} = 1$ in $\mathbb{Z}_{35}$ and therefore

$1 = 2^{24} = 2^{48} = 2^{72}$ in $\mathbb{Z}_{35}$.

Then $2^{245} = 2^{245 \bmod 24} = 2^5 = 32$ in $\mathbb{Z}_{35}$.

10。

What is the order of 2 in $\mathbb{Z}_{35}^*$?

Week 5 - Problem Set

13/15 分 (86%)

测验, 15 个问题

12

正确回答

$2^{12} = 4096 = 1$ in $\mathbb{Z}_{35}$ and 12 is the

smallest such positive integer.

0 / 1 分

11。

Which of the following numbers is a

generator of $\mathbb{Z}_{13}^*$?

- [ ] $3, \quad \langle 3 \rangle = \{1, 3, 9\}$

这个选项的答案不正确

No, 3 only generates three elements in $\mathbb{Z}_{13}^*$.

- [ ] $6, \quad \langle 6 \rangle = \{1, 6, 10, 8, 9, 2, 12, 7, 3, 5, 4, 11\}$

正确

correct, 6 generates the entire group $\mathbb{Z}_{13}^*$

- [ ] $4, \quad \langle 4 \rangle = \{1, 4, 3, 12, 9, 10\}$

这个选项的答案不正确

No, 4 only generates six elements in $\mathbb{Z}_{13}^*$.

- [ ] $7, \quad \langle 7 \rangle = \{1, 7, 10, 5, 9, 11, 12, 6, 3, 8, 4, 2\}$

正确

correct, 7 generates the entire group $\mathbb{Z}_{13}^*$

- [ ] $8, \quad \langle 8 \rangle = \{1, 8, 12, 5\}$

这个选项的答案不正确

No, 8 only generates four elements in $\mathbb{Z}_{13}^*$.

12。

Solve the equation $x^2 + 4x + 1 = 0$ in $\mathbb{Z}_{23}$.

Use the method described in Lecture 10.3 using the quadratic formula.

{14, 5}

不正确回答

The quadratic formula gives the two roots in $\mathbb{Z}_{23}$.

1 / 1 分

13。

What is the 11th root of 2 in $\mathbb{Z}_{19}$?

(i.e. what is $2^{1/11}$ in $\mathbb{Z}_{19}$)

Hint: observe that $11^{-1} = 5$ in $\mathbb{Z}_{18}$.

13

正确回答

$2^{1/11} = 2^5 = 32 = 13$ in $\mathbb{Z}_{19}$.

1 / 1 分

14。

What is the discete log of 5 base 2 in $\mathbb{Z}_{13}$?

(i.e. what is $\mathrm{Dlog}_2(5)$)

Recall that the powers of 2 in $\mathbb{Z}_{13}$ are

$$\langle 2 \rangle = \{1, 2, 4, 8, 3, 6, 12, 11, 9, 5, 10, 7\}$$

9

正确回答

$2^9 = 5$ in $\mathbb{Z}_{13}$.

Week 5 - Problem Set

1 / 1 分

15。

If p is a prime, how many generators are there in $\mathbb{Z}_p^*$?

- $\varphi(p)$
- $\varphi(p-1)$

正确

The answer is $\varphi(p-1)$. Here is why. Let g be some generator of $\mathbb{Z}_p^*$ and let $h = g^x$ for some x.

It is not difficult to see that h is a generator exactly when we can write g as $g = h^y$ for some integer y (h is a generator because if $g = h^y$ then any power of g can also be written as a power of h).

Since $y = x^{-1} \bmod p-1$ this y exists exactly when x is relatively prime to $p-1$. The number of such x is the size of $\mathbb{Z}_{p-1}^*$ which is precisely $\varphi(p-1)$.

- $\sqrt{p}$
- $(p+1)/2$
